Beautiful New *Window world*

Windows and doors form part of your living space and your own personal living environment. You should therefore give your full attention to your decision for the right window system.

Windows mould the character of your home – inside and out

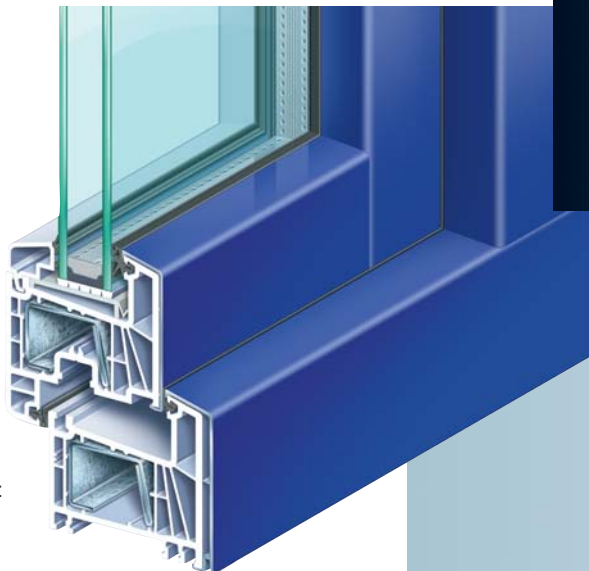

The windows of your home are structural elements that must fulfil the harshest requirements. Windows are much more than just a means to an end. They breathe life into a facade and raise the material value of your home. Windows are structural elements with the greatest design potential. We supply you with everything you need for the individuality of your unmistakable windows: every conceivable window shape and partition; aluminium covers for a wide range of colours; clip-on mullions/transoms, or internal between the insulating glazing; stylish handles; standard glazing, special glazing, and high relief glazing, e.g. for bathrooms and residential doors where prying eyes are not welcome.

All PVC-U profiles are stabilised with eco friendly calcium and zinc instead of lead. This not only promotes the protection of the environment, but also the quality throughout the window's lifecycle – for greater resistance to weathering, longer lasting gloss, and higher recycling efficiency: environmental protection that pays off.

That extra thermal insulation, sound insulation, and security

Even the standard versions of our window systems exhibit excellent thermal insulation and noise absorption properties. And these properties can be enhanced even further with special thermal and sound insulating panes. Also the basic security provided by this window system can be enhanced for maximum protection against forced entry with security hardware, burglar resistant glazing, and lockable handles.

- ▶ Modern window design of straight lines with slender profile sight lines and 70 mm installation depth
- ▶ Stable profile cross section with outstanding static properties for a long window life
- ▶ Integrating innovative design-protected steel reinforcement expands the system into a six chamber design with superior thermal insulation properties, Uf value = 1.3 W/(m²K)
- ▶ Aluminium covers for a virtually unlimited range of colour schemes
- ▶ All PVC-U profiles are stabilised with eco friendly calcium and zinc "greenline" instead of lead.

EuroFutur Classic

with aluminium cover – window system with 70 mm installation depth, offset, with black gaskets
